Bit Manipulation
(5th October)

- Introduction to operators and(&), or(|), xor(^), not(~), left shift(<<) and right shift(>>).

- Counting no. of set bits in a number x:

```
count = 0;
while(x)
{       x &= ( x-1 ); // Resets last set bit
        count++;
}
return count;
```

- Check if a number n is power of 2:

```
return n && ( ( n & ( n-1 ) ) == 0 );
```

- Finding position of first set bit from LSB

```
return n ^ ( n & ( n-1 ) );
```

- Checking i^{th} bit of a number x is set or not:

```
return ( x & 1<<i ) > 0;
```

- Set i^{th} bit of number N

```
N |= ( 1<<i )
```

- Clear i^{th} bit of number N

```
N &= ( ~( 1<<i ) )
```

- Update i^{th} bit to v of a number N
  1) Clear i^{th} bit
  2) N |= (v<<i)

- Count no. of set bits in number from 1 to N.

```
for(int i = 0; i <= n; i++)
        Ans[i] = Ans[i>>1] + (i&1);
```

Q - What is the maximum value that we can get by choosing at most k values from 1 to N (no repetition) and xor-ing them

Ans -
```
if(k==1)
        return n;
else
        return n ^ ( ~n );
```

Q - Generate all subsets of a set of size N.

Ans -
```
for(int i = 0; i < ( 1<<N ); i++)
{       for(int j = 0; j < N; j++)
                if( i & ( 1<<j ) )
                        printf("%d ",a[j]);
        printf("\n");
}
```

Q - What will be the xor of all numbers from 0 to N.

Ans -
```
if( N%4 == 1)
        return 1;
if( N%4 == 2 )
        return N+1;
if( N%4 == 3 )
        return 0;
else
        return N;
```

Q - Find XOR of all Numbers from L to R.

Ans - (Xor(0 to L-1) ^ Xor(0 to R)) // Xor function using above method

Q - Find a number N which lies between L to R with maximum set bits. If there are many such numbers return the minimum one.

Ans -
```
ans = L
for(int i = 1; i < 60; i++) // log(INT_MAX) = 60
{       if( ans | ( 1<<i ) <= R)
                ans |= ( 1<<i );
}
return ans;
```
